Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6451577

GENERAL INFORMATION:

APPLICANT: JI et al.

TITLE OF INVENTION: HUMAN URIDINE DIPHOSPHATE GALACTOSE-4-EPIMERASE
NUMBER OF SEQUENCES:

CORRESPONDENCE ADDRESS:

ADDRESSEE: HUMAN GENOME SCIENCES, INC.

STREET: 9410 KEY WEST AVE

CITY: ROCKVILLE

STATE: MD
                                                                                                                                                                                                                                                                                                                                                                                                                                93;
                                                                                                                                                                                                                                                                                                                                                                                    Length 348;
                                                                                                                                                                                                                                                                                                                                                                                                                              Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ZIP: 20850

                                                                                                                                                                                                                    9
                                The present invention provides the protein and coding sequences of the Arabidopsis thaliana GDP-4-keto-6-deoxy-D-mannose-3,5-epimerase-4-reductase. The sequence can be used for the efficient production of GDP-L-fucose, which is essential to the production of functionally important sugar chains containing L-fucose. The present sequence is the protein of the invention.
                                                                                                                                                                                                                                                                                                                  IPESALLTASLEPTNEWYAIAKIAGIKTCQAYRIQHGWDAISGMPTNLYGPNDNFHPENS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; términation sequence.
                       reductase. The enzyme catalyses the conversion of GDP-D-mannose to GDP-Laglactose. The enzyme can be modified, and used to produce transgenic microcoganisms, which can be used in fermentation techniques to produce vitamin C (ascorbic acid, L-ascorbic acid). The enzyme is modified to increase its action. Other ascorbic acid pathway enzymes which may be used in the method of the invention include hexokinases, glucose phosphate isomerases, phosphomannose isomerases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 VILAAAKVGGIHANNTYPADFIGVNLQIQTNVIHSAYEHGVKKLLFLGSSCIYPKFAPQP
